37. A [pinless composite] masonry block comprising a front surface, a back surface, a top surface and bottom surface, and first and second sides, said first side having a first inset wherein said first inset extends from said block top surface to said block bottom surface, said second side having a second inset wherein said second inset extends from said block top surface to said block bottom surface, said block comprising a protrusion on one of said top or bottom surfaces, said protrusion[,] being configured to mate with [the] an inset of one or more adjacently positioned blocks.

38. The block of claim 37 wherein said first and second insets are located [configured] to provide [an anchoring structure, said anchoring structure comprising said block back wall and] a portion of each of said first and second sides adjacent said fill retaining back surface.

40. The block of claim 37 wherein said block front surface[s] is faceted.

43. The block of claim 42 wherein said protrusion extends along said block top surface between said first and second insets.

47. The block of claim 46 wherein said protrusions are positioned on said block top surface adjacent said first and second insets.

48. A [pinless composite] masonry block comprising a

front surface and a back surface, a top surface and bottom surface, and first and second sides, said first side having a first inset wherein said first inset spans from said block top surface to said block bottom surface, said second side having a second inset, wherein said second inset spans from said block top surface to said block bottom surface, a protrusion on one of said block top or bottom surfaces, and, first and second anchoring legs, said first leg extending from said block first side and said second leg extending from said block second side.

55. The block of claim 54 wherein said protrusions are positioned on said block top surface adjacent said first and second insets.

56. A retaining [wall] structure, said [retaining [wall] structure comprising one or more courses, each of said courses comprising one or more [pinless composite] masonry blocks, each of said blocks comprising a front surface and a back surface, a top surface and bottom surface, and first and second sides, said first side having a first inset wherein said first inset extends from said block top surface to said block bottom surface, said second side having a second inset, wherein said second inset extends from said block top surface to said block bottom surface, a protrusion on one of said block top or bottom surfaces, wherein said [block] protrusion is configured to mate with [the] an inset of one or more adjacently positioned blocks.
